

Vulnerability Management as a Service (VMaaS)

Let's reduce your security debt

OVERVIEW

CSW's Vulnerability Management as a Service provides vulnerability scanning, integrated threat contextualization, business criticality, and risk escalation for exposures and threats actively trending in the wild.

Our security experts perform full-stack scanning from infrastructure to code and help organizations to quickly identify, validate, and remediate vulnerabilities based on exploit weaponizations. CSW will become your extended security force and will work with your team to improve your organization's security posture.

OUR APPROACH

- Full-stack scanning from infrastructure to code.
- Identify, investigate, validate and prioritize vulnerabilities based on exploit weaponization in the wild.
- Our RBVM platform maps vulnerabilities by criticality, exploitability and provides threat context.
- Prioritize vulnerabilities holistically by viewing network, system, app, container, cloud configuration, SAST, DAST, and manual pen-tests together.

OUR METHODOLOGY

- We use your scanners to assimilate data along with our scanners & proprietary scripts
- Investigate and map vulnerabilities to threats & exploits
- Prioritize vulnerabilities based on weaponization, impact, and criticality of the asset.
- Chart out a remediation plan

WHAT DO YOU GET?

A SECURE ENVIRONMENT

Map vulnerabilities to known threats and prioritize by criticality, exploits & impact

COST-EFFECTIVE SECURITY

Save on FTE cost, resources, tools & license.

REMEDiation WITH MINIMUM CHAOS

Structured easy-to-understand remediation plan layered with scans & rescans

BOOST IN SECURITY POSTURE

Improve your security potential and reduce security debt

WHY DO YOU NEED US

CSW's Vulnerability Management as a Service provides vulnerability scanning, integrated threat contextualization, business criticality, and risk escalation for exposures and threats actively trending in the wild.

Our security experts perform full-stack scanning from infrastructure to code and help organizations to quickly identify, validate, and remediate vulnerabilities based on exploit weaponizations. CSW will become your extended security force and will work with your team to improve your organization's security posture. Vulnerability management is a continuous process that can counter the evolving threat landscape. Here is how we can help you -

Provide you with a dedicated expert that will focus on your vulnerabilities and weaknesses, leaving you free to build your infrastructure without fear of being breached.

Proactively neutralize threats as they emerge and help stay a leap ahead of threat actors.

Tailor the VMaaS process based on your business needs and the unique threats that you face.

Help understand the attacker's perspective to find what vulnerability attracts them the most.

KEY BENEFITS

- Save on FTE costs
- Improve your security posture
- Improve productivity while we focus on security
- Get actionable Intelligence, metrics & reports
- Fast remediation
- Proactive support

WHAT TO EXPECT IN OUR REPORT

Prioritized vulnerabilities based on threats, exploits, malware & APT Groups.

MITRE ATT&CK Matrix & simulating a threat actor's movement.

Detailed proof-of-concept.

Recommendations, remediation guides, specific fixes & support.

Reach out to us to reduce risk and exposure.
