Services Solution Brief

Build a secure business without the fear of a breach

We bring to you decade-long expertise in vulnerability and exploit research. Our team comprises experienced pentesters and security experts who will collaborate with your security team and IT staff to improve the overall security posture for your organization.

THE CHALLENGE

Today, most organizations are using ineffective and expensive cybersecurity solutions and become victims of ransomware and cyber-attacks despite spending thousands of dollars on security.

OUR SERVICES

Our risk management solutions bundle expertise, experience, and hard-core research and provide organizations of all sizes with an affordable program that can be quickly implemented.

VULNERABILITY MANAGEMENT AS A SERVICE:

We provide comprehensive vulnerability scanning (infrastructure to code), assessment, integrated threat contextualization, business criticality, and risk escalation. Our team of expert security analysts communicate, collaborate, and remediate synchronously, allowing your team to focus exclusively on remediation. Our solution has helped organizations to continuously improve their security posture and become resilient in the face of ever-evolving threats.

PENETRATION TESTING AS A SERVICE:

We have performed thousands of penetration testing engagements across various industries from small organizations to Fortune 500 companies. We continuously refine our methodology and adopt the latest industry and attack trends along with NIST 800-115 recommendations. Our penetration testing service helps organizations understand their baseline from the perspective of OWASP Top 10 and SANS Top 25 vulnerabilities. We identify their vulnerabilities and weaknesses and help remediate them to reduce risk and exposure.

PCI COMPLIANCE SERVICES:

CSW is an accredited PCI Qualified Security Assessor (QSA), and we have helped companies secure their financial transactions and meet PCI compliance requirements. PCI DSS requires organizations to perform quarterly external vulnerability scans by an approved scanning vendor (ASV). As an ASV, we perform external network vulnerability scanning of a merchant or a service provider and evaluate their system security, payment account data, and internet-facing systems.

Detect, Prioritize and Remediate

100+
Pen Testers & Threat Hunters

zero days discovered

Is your current Pen Testing company a CVE Numbering Authority?

KEY BENEFITS

PRIORITIZED VULNERABILITIES:

We prioritize your vulnerabilities based on threats, exploits, malware, and APT groups and let you know what you need to fix first. We deliver results through a near real-time cloud-based platform that provides you actionable intelligence, prescriptive remediation, specific guidance, and patch recommendations.

ADVERSARIAL APPROACH:

We take an adversarial approach to our engagement that allows us to think like a hacker and give you a threat actor's perspective of how they would penetrate your defenses.

VULNERABILITY EXPERTISE:

Our R&D team has years of experience in exploit and vulnerability research which allows us to provide you with deep insights about your cyber risk.

ACTIONABLE INTELLIGENCE:

Overworked security teams need actionable insights that tell them what they should be fixing first and why. Our customers find our remediation prescriptive, and can access specific guidance and support through our platform

WHY CSW?

CSW is a CVE Numbering Authority (CNA) sponsored by the Department of Homeland Security (DHS) USA. We bring a decade of expertise in vulnerability and exploit research with 49 zero day discoveries to our credit. We have worked with hundreds of organizations, improving their security posture and building resilience against threats.
